III.	Ascension to PCMP+ Site Designation	4
IV.	Ascension to ECP Site Designation.....	5

I. Site Designation Overview

There are three different site designations that make up the Colorado Access (COA) primary care medical provider (PCMP) network: PCMP, PCMP+, and enhanced clinical partner (ECP). Each site designation is defined as follows:

PCMP	<p>A provider site that is eligible to receive the following type of per member per month (PMPM) payment:</p> <ul style="list-style-type: none"> • Utilizer <p>A provider site that is not required to provide care management for its attributed members. Care management services are provided by Colorado Access.</p>
PCMP+	<p>A provider site that is eligible to receive the following types of PMPM payments:</p> <ul style="list-style-type: none"> • Utilizer • Complex member <p>PCMP+ sites provide care management for attributed adult and/or pediatric complex members and submits care management data to Colorado Access for review. Colorado Access provides care management for all other attributed members.</p>
ECP	<p>A provider site that is eligible to receive the following types of PMPM payments:</p> <ul style="list-style-type: none"> • Utilizer • Complex member • ECP care management <p>ECP sites provide care management for all attributed members regardless of complexity and submits care management data to Colorado Access for review.</p>

II. Annual Site Designation Review

Providers are reviewed annually at *the site level* on their performance across clinical metrics and their operational readiness to ascend to a higher site designation. If a provider is approved for ascension, Colorado Access will schedule a discussion with the provider to gauge interest in ascension and/or alternative opportunities. Ascension will occur at the site level and does not guarantee ascension for other sites included under the same tax ID number (TIN).

III. Ascension to PCMP+ Site Designation

A. Clinical Performance Requirements

To be eligible for a PCMP+ site designation a provider must score in the **Colorado Access 80th percentile on at least two of the following clinical metrics for a minimum of nine of the 12 months** in the previous calendar year measurement period:

Clinical Metric	Applicable Model(s)
Depression screening	All models
Well child 0 to 15 months	Pediatric and family medicine models
Well child 15 to 30 months	Pediatric model
Child & adolescent well visits ^Δ	Pediatric and family medicine models
A1c testing	Family and internal medicine models
Contraceptive counseling	Reproductive health model

^ΔLimited to pediatric or family medicine providers with fewer than 10 infants in the well child 0 to 15 years or 15-to-30-month metrics.

Sites with fewer than 10 members in the denominator for any measure are excluded from the 80th percentile performance calculation. Percentile performance is calculated monthly and reported at the Colorado Access PCMP network level.

B. Structural Requirements

The provider site must meet engagement and structural performance requirements to demonstrate readiness to ascend to the next site level designation. Engagement and structural metrics include:

Metric	Performance Requirement
Engagement rate	Meet or exceed COA PCMP network median
Complex claims engagement	Meet COA PCMP network median
PCMP practice assessment	Minimum 96%
Presence of integrated behavioral health care	Site must have in-person or virtual behavioral health care services available
Care management	Site must have care management staffing, resources and best practices established
Care management reporting	Site must agree to timely reporting of care management data to COA in an agreed upon format
Quality improvement	Site must have an established quality improvement program

Sites with fewer than 10 members in the denominator for any measure are excluded from performance calculations. Performance is calculated annually and reported at the Colorado Access PCMP network level.

The **Colorado Access Administrative Payment Model Specification document** describes the methodology Colorado Access has implemented for calculating measure performance and can be found online at coaccess.com/providers/resources/vbp.

Sites that ascend to the PCMP+ designation will be required to maintain this designation for a **minimum of two years** before being eligible for an ECP site designation review. This two-year period gives Colorado Access the ability to collect and evaluate care management data and quality of care planning activities.

IV. Ascension to ECP Site Designation

After completing two years with a PCMP+ designation, eligible sites may be considered for an ECP site designation, provided they meet the following performance requirements:

Metric	Applicable Model(s)	Performance Requirement
Complex member extended care coordination	All models	Minimum 98%
Diabetes medication adherence	Family medicine, internal medicine, & reproductive health models	Meet or exceed COA ECP network median
Asthma medication adherence	Family medicine, pediatric, & reproductive health models	Meet or exceed COA ECP network median
Case review score	All models	Minimum 40 points
ECP assessment score	All models	Minimum 95 points

Sites with fewer than 10 members in the denominator for any measure are excluded from performance calculations. Performance is calculated annually and reported at the Colorado Access PCMP network level.

The **Colorado Access Administrative Payment Model Specification document** describes the methodology COA has taken for calculating measure performance and can be found online at coaccess.com/providers/resources/vbp.
